ResearcherID: <http://www.researcherid.com/rid/D-3292-2012>

APPOINTMENTS

Cain Department of Chemical Engineering, Louisiana State University, Baton Rouge, LA
Assistant Professor 2016 – present

EDUCATION

Northwestern University, Evanston, IL 2013 – 2016
Postdoctoral Researcher
Advisor: Peter C. Stair

University of California, Santa Barbara, CA 2009 – 2012
Postdoctoral Researcher
Advisors: Galen D. Stucky and Horia Metiu

Institute of Chemistry, Chinese Academy of Sciences, Beijing, China 2004 – 2009
Ph.D. in Chemistry; “*Ionic Liquid Assisted Synthesis of Functional Nanomaterials*”
Advisors: Buxing Han and Zhimin Liu

Zhengzhou University, Zhengzhou, China 2000 – 2004
B.E. in Materials Science and Engineering
Advisor: Qun Xu

FELLOWSHIPS AND AWARDS

Outstanding Ph.D. Dissertation Award (top 5%) 2009
Institute of Chemistry, Chinese Academy of Sciences

Director Fellowship 2007
Institute of Chemistry, Chinese Academy of Sciences

Qingdao Haiyang Chemical Co. Ltd. Fellowship 2007
Institute of Chemistry, Chinese Academy of Sciences

Outstanding B.E. Dissertation Award (top 5%) 2004
Zhengzhou University

RESEARCH EXPERIENCE

Northwestern University 2013 – 2016
Postdoctoral Researcher
Advisor: Peter C. Stair

Site-specific atomic layer deposition (ALD) of noble metals on mesoporous zeolites

- Investigated mesoporous zeolites as supports for the site-specific ALD of noble metals.
- Identified and quantified platinum single atoms and nanoparticles via diffuse reflectance infrared Fourier transform spectroscopy (DRIFTS) using CO as a probe molecule.
- Identified that Pt nanoparticles, not single atoms, are the active sites in low-temperature CO oxidation and water-gas shift reactions via CO/O₂ and CO/H₂O DRIFTS.

- Supervised a group of more than ten ALD users, arranged user meetings, coordinated the instrument usage, trained new users, and maintained the instrument; installed a new ALD instrument for the group.

Olefin metathesis on supported metal oxides

- Increased the low-temperature propylene metathesis activity of MoO_x/SiO₂ and WO_x/SiO₂ by two to three orders of magnitude using a highly efficient and straightforward activation procedure.
- Clarified the deactivation mechanism of MoO_x/SiO₂ and WO_x/SiO₂ in propylene metathesis.
- Developed a new methodology to regenerate heterogeneous olefin metathesis catalysts.
- Identified the olefin metathesis active sites of MoO_x/SiO₂, monomeric Mo(=O)₂ dioxos, using isotope tracing, infrared and Raman spectroscopy, and atomic-resolution electron microscopy.
- Designed and assembled a multifunctional fixed-bed reactor with online GC and MS analysis.
- Wrote NSF grants.

University of California, Santa Barbara

2009 – 2012

Postdoctoral Researcher

Advisors: Galen D. Stucky and Horia Metiu

Hierarchical porous zeolite synthesis

- Proposed and validated a new concept for hierarchical porous zeolite synthesis, without using any supramolecular or hard template.
- Initiated international collaboration with Professor Avelino Corma (ITQ, Spain).

Microwave synthesis of metal chalcogenides in ionic liquids

- Developed a green, universal, and scalable approach for the synthesis of metal chalcogenide micro/nanostructures from elemental precursors.

Halogen mediated natural gas conversions

- Discovered the iodine catalytic effect on methane bromination.
- Demonstrated bromine-iodine mediated propane oxidative dehydrogenation, and achieved a single-pass propylene yield of 80% at a reaction temperature of 800K.
- Investigated the catalytic performances of supported group VIII metals in dibromomethane hydrodebromination, in order to improve the efficiency of bromine-based methane conversions.
- Unveiled the analogous nature of the halogen and oxygen-mediated pathways for the conversion of methane to higher hydrocarbons.
- Calculated the reaction thermodynamics and simulated the reaction kinetics.

Institute of Chemistry, Chinese Academy of Sciences

2004 – 2009

Graduate student researcher

Advisors: Buxing Han and Zhimin Liu

Ionic liquid assisted synthesis of functional nanomaterials

- Investigated phase, shape and size-controlled synthesis of TiO₂ nanocrystals in ionic liquids.
- Developed microwave-assisted ionothermal syntheses of high quality TiO₂ and SnO₂ nanocrystals.
- Synthesized polystyrene-polyaniline and CNT-SiO₂ core-shell structures via nucleation control.
